INFIX TO POSTFIX

1. Write a program to convert a given valid parenthesized infix arithmetic expression to postfix expression. The expression consists of single character operands and the binary operators + (plus), - (minus), * (multiply), / (divide) and ^ (power).

```
#include <stdio.h>
#include <conio.h>
#include <ctype.h>
#include <string.h>
#define MAX 100
char st[MAX];
int top = -1;
void push(char st[], char);
char pop(char st[]);
void InfixtoPostfix(char source[], char target[]);
int getPriority(char);
int main()
{
  char infix[100], postfix[100];
  clrscr();
  printf("\n Enter any infix expression : ");
  gets(infix);
  strcpy(postfix, "");
  InfixtoPostfix(infix, postfix);
  printf("\n The corresponding postfix expression is : ");
  puts(postfix);
  getch();
  return 0;
```

```
}
void InfixtoPostfix(char source[], char target[])
{
  int i = 0, j = 0;
  char temp;
  strcpy(target, "");
  while (source[i] != '\0')
  {
    if (source[i] == '(')
       push(st, source[i]);
       i++;
    else if (source[i] == ')')
       while ((top != -1) && (st[top] != '('))
         target[j] = pop(st);
         j++;
       if (top == -1)
         printf("\n INCORRECT EXPRESSION");
         exit(1);
       temp = pop(st);
       i++;
     else if (isdigit(source[i]) || isalpha(source[i]))
```

```
target[j] = source[i];
    j++;
    i++;
  }
  else if (source[i] == '+' || source[i] == '-' || source[i] == '*' ||
       source[i] == '/' || source[i] == '%')
  {
    while ((top != -1) && (st[top] != '(') && (getPriority(st[top]) > getPriority(source[i])))
       target[j] = pop(st);
       j++;
    }
    push(st, source[i]);
    i++;
  else
    printf("\n INCORRECT ELEMENT IN EXPRESSION");
    exit(1);
  }
}
while ((top != -1) && (st[top] != '('))
  target[j] = pop(st);
  j++;
target[j] = '\0';
```

}

```
int getPriority(char op)
{
  if (op == '/' || op == '*' || op == '%')
    return 1;
  else if (op == '+' || op == '-')
    return 0;
}
void push(char st[], char val)
  if (top == MAX - 1)
    printf("\n STACK OVERFLOW");
  else
  {
    top++;
    st[top] = val;
  }
}
char pop(char st[])
  char val = ' ';
  if (top == -1)
    printf("\n STACK UNDERFLOW");
  else
  {
    val = st[top];
    top--;
  }
```

```
return val;
```

OUTPUT:

Enter any infix expression : A+B-C*D

The corresponding postfix expression is : AB+CD*-
